PROFESSIONAL SUMMARY

Software engineer with experience in Linux systems and distributed applications. Expertise in Docker, Kubernetes, Ansible, SSH, Prometheus and Grafana.

EDUCATION

Northeastern University Sep 2025 - May 2027
Master of Science, *Computer Science* GPA: 3.9

Siddaganga Institute of Technology Dec 2021 - Jun 2025
Bachelor of Technology, *Artificial Intelligence and Data Science*

WORK EXPERIENCE

Siemens | Software Engineer Intern | Remote Aug 2024 - Jul 2025

- Resolved **9 production issues** by tracing application logs, REST requests and downstream service calls, improving stability across 2 applications serving **2,500+ users**.
- Diagnosed **API integration and latency failures** across frontend and backend services through logs and end-to-end request tracing, maintaining **850 ms p95 response latency** after remediation.
- Led 3 interns through architecture and integration troubleshooting over 8 weeks, reducing production issues by **35%** through debugging and validation.
- **Automated** frontend and backend deployments using **Docker, Azure, and Vercel CI/CD pipelines**, reducing release time by 70%, from 20 to 6 minutes.

Unisys | Software Engineering Intern | Remote Apr 2024 - Jun 2024

- Built and validated **WebSocket-based messaging** supporting 350 concurrent conversations with **sub-150 ms delivery latency and 99.8% message delivery**.
- Diagnosed API, database and client-side failures across a marketplace serving **8,000+ users and 1,600+ orders**, improving reliability of critical user workflows.
- Optimized application performance through profiling and iterative debugging, reducing page load time below **1.2 seconds** and increasing mobile conversion by **8%**.

PROJECTS

Homelab Infrastructure — Linux & Kubernetes Operations Platform | Linux, Bash, K3s, Docker, Ansible, Terraform, Prometheus, Grafana, Loki, Alertmanager

- Built and operated a **multi-node Linux environment on KVM/libvirt and K3s**, provisioning VMs with Terraform and standardizing host configuration through Ansible inventories and playbooks.
- Implemented **Prometheus, Grafana, Loki and Alertmanager** with 20+ alert rules, monitoring **system availability and performance**.
- Authored **14 operational and disaster-recovery runbooks** covering control-plane, node, storage and application failures, with documented ~**2-hour RTO and <24-hour RPO**.

Guardian — Linux Fleet Monitoring & Auto-Remediation | Python, Linux, Ansible, Prometheus, Grafana, Alertmanager, Docker, SSH

- Built a **Linux fleet monitoring platform** with Prometheus, Grafana and Alertmanager, detecting unavailable hosts and sustained CPU degradation through automated health alerts.
- Automated **host provisioning and remediation with Ansible and SSH**, using inventory-driven deployment and bounded runbooks to standardize recovery actions across monitored systems.
- Validated the incident workflow with **stress-ng failure injection**, triggering HighCPU alerts and restoring normal system state within **3 minutes**.

Homelab Server Architecture — Linux & Ansible Platform Operations | Linux, Bash, Proxmox, Ansible, Docker, SSH, Prometheus, Grafana, Tailscale

- Built and operated a **10-node Proxmox Linux platform**, administering Docker and LXC services through SSH and Tailscale with centralized monitoring and configuration management.
- Automated fleet configuration with **49 Ansible playbooks and 44 reusable roles**, managing system configuration, services, storage, monitoring and recovery procedures.
- Root-caused and documented **28 operational issues**, converting recurring failures into **21 standardized runbooks** with explicit troubleshooting, verification and rollback procedures.

SKILLS

Operating Systems: Linux, Bash, Linux CLI, File Systems, Permissions, Processes, systemd, Package Management, SSH

Containers & Orchestration: Docker, Docker Compose, Kubernetes, K3s, Pods, Deployments, Container Logs, Liveness/Readiness Probes

Configuration & Infrastructure: Ansible, Playbooks, Roles, Inventory, Ansible Vault, Terraform, KVM/libvirt, Proxmox

Monitoring & Operations: Prometheus, Grafana, Alertmanager, Loki, System Monitoring, Log Analysis, Health Checks, Incident Troubleshooting

Networking: TCP/IP, HTTP/HTTPS, DNS, SSH, Linux Networking, Tailscale

Cloud & DevOps: AWS, Azure, GitHub Actions, GitLab CI/CD

Languages: Python, Bash, Go, Java, SQL, TypeScript

Operational Practices: Incident Response, Root-Cause Analysis, Runbooks, Escalation, Postmortems, Disaster Recovery, RTO/RPO

CERTIFICATIONS & ACHIEVEMENTS

- Open Source - Merged PR #472 into mindsdb/anton, fixing a bug that deleted saved user rules and adding 3 regression tests. Sep 2026
- Publication - "Detection of DDoS Attacks in Fog Computing using Interpretable Quantum-based 2Q Learning Approach" - IEEE Jan 2025
